

Weight-Based Replenishment

Weight-Based Replenishment

PAR Bins/PAR Bar is the first truly automated healthcare replenishment system, engineered to remove caregivers entirely from inventory processes associated with current technologies. PAR Bins/PAR Bar are revolutionizing the supply chain, providing nursing with the confidence to know that the right supplies will be in the right place, at the right time.

PAR Bins/PAR Bar dramatically changes the way Materials Management Departments serve their customers. By measuring and managing PAR Location product usage in near real time, supply decisions are made proactively rather than reactively. Hours spent on reconciliation and requisition can be re-deployed to better serve your customers.

Utilizing the latest technology, PAR Bins/PAR Bar weight-sensors automatically identify supply usage as it occurs, communicating to Materials Management for timely replenishment. Demand shifts are easily recognized and proactively adjusted, reducing service interruptions – all without distracting your clinical staff from patient care.

- Eliminate daily counting and requisitioning
- Reduce critical service interruptions
- Optimize inventory turnover
- Effectively manage pick frequency
- Real-time enterprise-wide inventory visibility

Offering the ultimate in flexibility, PAR Bins/PAR Bar can be paired with any other PAR Excellence products to create a customized solution within each PAR Location. This allows you

to match the technology investment to the business needs of that specific PAR Location.

For those organizations that choose to track supplies to individual patients for either cost accounting or revenue purposes, PAR Bins/PAR Bar can be integrated with PAR Express or any other of our patient-centric products to create an unparalleled solution for detailed supply tracking and automated replenishment.

Combining PAR Vision with a weight-based configuration creates the most powerful and responsive supply chain process available today. The power to collect all transactional data is effectively matched with the power to convert data into decisions. Service Levels, Inventory Velocity, Demand Forecasting and Economic Order Quantity modeling are now at your fingertips. No cumbersome reports to run, sort and dissect. Just clear answers to key questions.

Installation and Training

Custom Installation and Training

The PAR Excellence Team brings years of healthcare Materials Management experience and top information systems professionals to your organization. This experience and knowledge allows us to design a system that meets all of your hospital's goals and objectives. In addition, we handle all of the details and make recommendations to ensure your installation is worry-free.

The following installation and training services are offered:

PAR Server: The System hardware will be completely configured and all software loaded and ready to use.

Interface Development: Interfaces will be configured to work with your ADT, Billing and Materials Management Information Systems.

Physical Arrangement of PAR Locations: PAR Excellence can, if desired, configure and arrange your PAR Locations to maximize efficiency and organization. Your database can be electronically downloaded from existing information. Scales, BarTags and QR Tags will be installed as desired.

Training: Expert personalized training is available to Materials and Nursing staff. PAR Excellence can train the entire staff or provide a train-the-trainer approach.

Support Services

PAR Excellence provides unparalleled support through our Account Manager Program. Experienced healthcare Materials Management experts provide local support during your implementation. Once the installation is complete, Account Managers are available to either visit your site or schedule a webinar to train you on any new product features.

Proactive Technical Product Support

Each client's system automatically reports to the PAR Excellence support system on a scheduled basis to provide status reports on all equipment. This allows PAR Excellence to proactively monitor your system so that you don't need to. In addition, the toll-free PAR Excellence Support Hotline is staffed 24/7 by experts who provide thorough, effective assistance from our support offices.
