SPECIAL PROCEDURE PRODUCTS DEMAND INVENTORY AUTOMATION

High revenue generating departments like Special Procedures deserve world-class inventory management technology. And knowing what you have, where it is and what you need is critical to any successful department.

As the only provider of weight-based inventory management solutions, PAR's clients turn to us because they know that automating inventory management in their Special Procedure departments isn't an option, it is a requirement for meeting their overall financial improvement and operational goals.

STENTS • COILS • CATHETERS • GUIDEWIRES • BALLOONS • FILTERS

TAKE CONTROL OF YOUR INVENTORY

Products used in special procedure departments are designed to meet the requirements of the patient and the physician. This means carrying numerous sizes and often storing them in multiple procedure rooms. Demand for a wide variety of product SKUs and continuous innovation by manufacturers necessitates non-standard purchasing arrangements such as consignment, vendor managed inventory and walk-ins.

PAR Excellence's PAR Cloud platform was developed for exactly these inventory management challenges. Whether monitoring inventory across hospitals or between rooms in a single department, PAR's technology effortlessly tracks the quantity, location, status, condition, and value of your critical inventory in real time.

Automated tracking
and replenishment

Compatible with
existing storage

Track serial,
lot and expiration

Integrates with ERP
and EMR systems

REGRETTABLE & AVOIDABLE

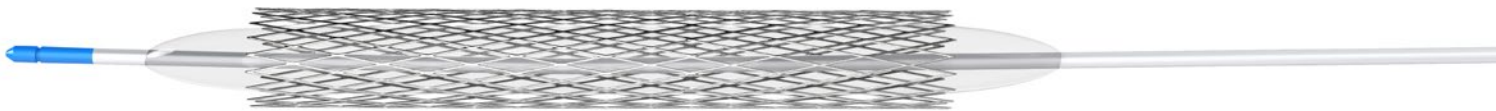

An inventory system that is completely ineffective unless your staff scans every product upon receipt, when moving between locations and after use is both regrettable and avoidable. PAR Excellence's hardware liberates your staff from the constant scanning of package barcodes by effortlessly managing your inventory using the product's weight. Sensitive down to a packet of Q-tips, PAR's scales are designed for all product types and the transaction demands of today's modern special procedures department.

Scan Fatigue:

/skan • fə'tēg/

noun (*gerund*):

Indeterminate malaise (fatigue) which settles into a group due to a demand to continuously adhere to a non-value added activity or practice.

AUTOMATE THE MANAGEMENT FOR ALL OF YOUR PRODUCTS IN ALL LOCATIONS

Your department may use some of the most expensive supplies in your hospital, but your department inventory also consists of gloves, gowns, gauze, drapes, etc. PAR Excellence automates your inventory management for all products. In all locations.

Whether managing procedure packs or catheters, endo-mechanical devices or IV solutions, PAR Excellence's weight-based inventory management technology is highly aligned with your goals to improve department operations, reduce cost, and enhance patient care.

PAR's weight-based inventory technology enables you to reduce labor while improving supply chain operations. Avoid overstock, eliminate expiration and save labor and time by utilizing PAR Excellence for all your special procedure product storage locations.

Real-time data
and insights

Scalable to
cover all SKUs

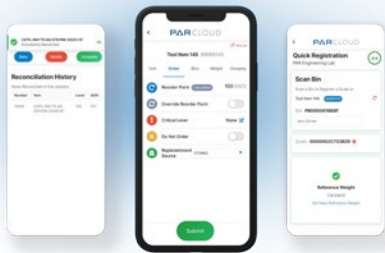

Always-accurate
inventory values

and built to last

INVENTORY AUTOMATION WITH PAR EXCELLENCE **MEANS YOU HAVE OPTIONS**

Automation is the way of the future, and has never been more important. But automation without options can be frustrating. PAR's technology is flexible, enabling clients to deploy multiple approaches to inventory management within the same department: PAR scales for the OR core, picking area and central sterile and PAR Scanning in the procedure room cabinets to manage patient documentation and avoid expiration.

PAR MOBILE: INVENTORY AUTOMATION IN THE PALM OF YOUR HAND

Fully featured and secure, PAR Mobile enables you to see everything about your inventory. Where it is, how much you have, who is taking it and when you're getting more. Stay connected and stay in control with PAR's fully featured PAR Mobile platform.

ANALYTICS & REPORTING VIA **PAR CLOUD:**

Our proprietary Internet-of-Things (IoT) operating system tracks your inventory in real time. Access key details about how your inventory is being consumed, in which procedures and by which physicians. Optimize performance while minimizing expenses by using PAR Cloud to analyze budgets, orders, deliveries and labor.

LET'S TALK ABOUT BUILDING A BETTER SUPPLY CHAIN.
